

## Metal-Era Continuing Education Programs

# UNDERSTANDING ANSI/SPRI/FM 4435/ES-1 STANDARDS

The roof edge serves as the building's first line of defense against damaging winds and severe weather. That's why specifying a roof edge to be compliant with ANSI/SPRI/FM 4435/ES-1 and other important testing standards to meet building code is critical.

Learn more about how you can significantly reduce risk and liability while protecting roof systems against failure.

To request a presentation, please contact Gary Horner at [gary@hornerassocd7.com](mailto:gary@hornerassocd7.com) or (801) 712-0326 OR Keith VanNess at [keith@hornerassocd7.com](mailto:keith@hornerassocd7.com) or (801) 520-5624

## ATTENDEES ARE ELIGIBLE TO EARN:

One (1) AIA Health, Safety and Welfare (HSW) Learning Unit  
One (1) IIBEC Continuing Education Hour (CEH)

## AVAILABLE FORMATS:

Live, In-Person  
Live, Webinar

## PROGRAM CONTENT AT-A-GLANCE

Importance of edge metal

Understanding the impact of wind

Why ANSI/SPRI/FM 4435/ES-1 is necessary

ANSI/SPRI/FM 4435/ES-1 testing methods

How to calculate wind design pressure to comply with code requirements
